

Volatility & Risk Monitoring

Threshold-driven market movement surveillance

VOLATILITY HEATMAP

This dashboard provides an interactive view of day-over-day market movement across BTC, EUR, and GBP. The Volatility Heatmap visualizes the magnitude and direction of daily percentage changes using a diverging color scale, allowing users to quickly identify periods of heightened volatility and market instability.

ABOUT THRESHOLDS

Adjust the Risk Threshold % parameter to highlight days where the absolute daily % change exceeds the selected level.

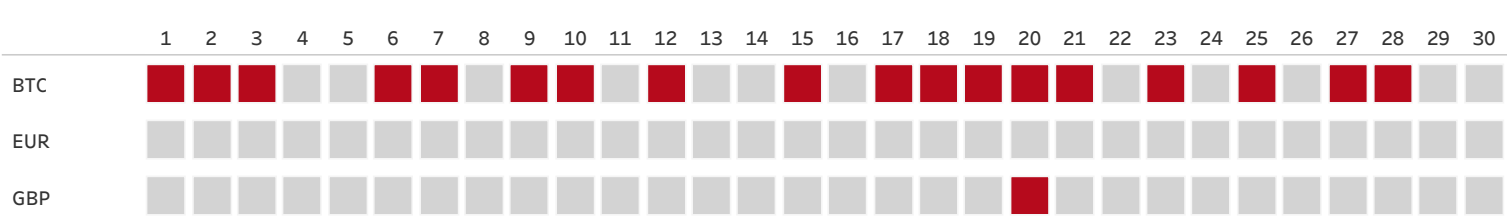

This simulates different risk..

INTERACTION TIPS

Hovering over any heatmap or trigger cell displays a detailed tooltip containing the selected asset, reporting date, daily percentage change, normalized Base 100 Index value, volatility status, and contextual monthly performance metrics.

RISK TRIGGER MONITOR

The Risk Trigger Monitor complements this analysis by dynamically highlighting days where market movement exceeds a user-defined Risk Threshold parameter, simulating real-time alert monitoring and foreign exchange risk management.
